

# LENGO

INCREASED PRODUCTIVITY ON THE  
INDIVIDUAL LEVEL

## The Intelligent Network

---

With the introduction of Lengo, Lencore is able to help increase productivity on the individual level!

Lengo embraces the diverse work habits of the individual and creates a means for short term concentration when heads-down work is required.

Scientifically proven to increase focus and reduce distractions, Lengo's individual productivity service works in tandem with Lencore's sound masking solutions, delivering privacy and comfort for larger office environments.

## How It Works

---

Scientists have discovered that depending on your personality type, there is a specific type of “music” that when engineered just right, puts your brain into a “flow state” making you hyper-focused and exponentially more productive.

Lengo will ask the user a few questions, determine the perfect music for that user, and present the scientifically engineered music channel that has been proven to increase that users focus and productivity levels by up to 4x. The user will still have access to over 50 other channels but will know exactly what channels create the best focus for their unique personality.

## Individual Options for Increased Concentration

---

 Einstein's Genius	 Alpha Chill	UpTempo	 Classical	 Focus Spa
 Acoustical	 Ambient	 Cinematic	 Classical Piano	 Kora
 Baroque Piano	 Water	 ADHD Type 1	 Cafe Focus	 Drum Zone

- Over 50 diverse channels
- Thousands of hours of unique tracks
- Exclusively commissioned and remixed
- Based on proven neuroscience research

DELIVERED BY FOCUS@WILL

## The Science Behind Lengo

---

Our senses are constantly inundated with information: the light streaming in the windows, the sight of people passing by on the street, the smells of a cafe, the sounds of conversations and dogs barking over the din of city traffic, the light scrape of a scarf around your neck, the pressure of the hardwood table on your elbows. Each time you notice something in your environment, you are paying attention to it. The ability to focus your attention on something while ignoring competing stimuli is called selective attention by psychologists, and we would never get anything done without it.

Lengo works by keeping your brain at the right focus level at least in part by increasing beta and theta brainwave activity. Increases in beta waves have been tied to sustained focus and attentional control, and biofeedback technology that specifically increases beta waves has been successfully used to treat attention disorders. Theta waves, in some situations, are also related to task focus. Lengo increases both beta and theta activity, relative to plain music, in areas of the brain related to task focus and preparedness.
